Presentation on August 1st

Pricing Cars...

Your job is very simple: based on the cars.csv dataset, your group need to come up with a predictive model to price cars based on its features. At the presentation day (Aug 1st) I will make available a new set of test data for us to test the accuracy of the models presented by each group. Your grade on this assignment will be determined by a combination of your presentation, write-up and how well your model performs in the test data!

Your two-page project write-up is also due on Aug 1th. Basically I want you to describe what you have done and why? Also, I want you to give me a sense of what predictors are important in your final model. One write-up per group.
