

Predictive Models Group Project

Carlos M. Carvalho
Texas MSBA
McCombs School of Business

Presentations on August 16th

Final Project...

Your job is very simple: find an interesting prediction/classification problem and develop the best possible predictive algorithm for the variable of interest.

Your group will have to make a presentation to the class describing the problem and the steps you took to arrive at your final solution.

Basically I want you to describe what you have done and why? Also, I want you to give me a sense of what predictors are important in your final model. Your group is required to submit a hard copy of your presentation. Feel free to add a two-page write-up of notes to go along with your presentation.

You also need to submit data and code for your final analysis. I need to be able to replicate it!
