April 2015

Introduction

401(k) plans are employer-sponsored defined contribution (DC) retirement plans:

- 401(k) plans cover more than half of the retirement assets in the private sector.
- The value of assets reached \$4.2 trillion dollars in 2013, over half of which is invested in mutual funds.
- 401(k) savings are the main source of retirement wealth for many participants.

- 401(k) savings are the main source of retirement wealth for many participants.

Service Providers

In this study, we focus on the incentives of the service providers in a plan (i.e., trustee, record keeper).

Sponsors are required by law to appoint a trustee to the plan:

- Mutual fund family (most often): Fidelity, Vanguard, T.Rowe Price, etc.
- Bank /Financial institution (occasionally): Metlife, First Union NB, etc.
- Consulting firm (rarely): Hewitt, etc.

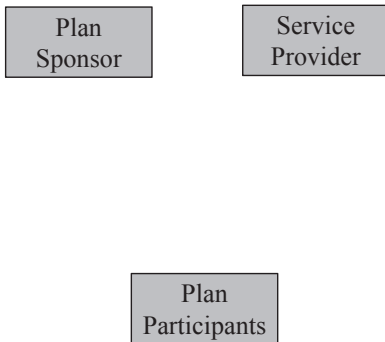

Service Providers

Employer Stock: Plexus Corp.

Conflicts of Interest

The existence of affiliated funds on these menus generates conflicting incentives for service providers:

- Service providers have to act to the benefit of participants. Their actions are governed by the Employee Retirement Income Security Act of 1974 ("ERISA").
- Service providers have a financial interest to maximize their firms' profits.

Surprisingly, little is known about how these conflicted incentives affect the investment choices offered to the participants and their consequences.

Research Questions

- Do the competing incentives of mutual fund service providers leave a footprint on the plan's menu?
- Are participants able to see through these incentives?
- Are the decisions costly or beneficial to plan participants?

Research Questions

- Do the competing incentives of mutual fund service providers leave a footprint on the plan's menu?
- Are participants able to see through these incentives?
- Are the decisions costly or beneficial to plan participants?

Research Questions

- Do the competing incentives of mutual fund service providers leave a footprint on the plan's menu?
- Are participants able to see through these incentives?
- Are the decisions costly or beneficial to plan participants?

Preview of the Results

- Poorly-performing affiliated funds are less likely to be removed from 401(k) plans than poorly-performing unaffiliated funds.
- Plan participants are not very sensitive to past performance and do not compensate for the favoritism bias in their asset allocations.
- Favoritism toward poorly performing affiliated funds is costly for plan participants.

Preview of the Results

- Poorly-performing affiliated funds are less likely to be removed from 401(k) plans than poorly-performing unaffiliated funds.
- Plan participants are not very sensitive to past performance and do not compensate for the favoritism bias in their asset allocations.
- Favoritism toward poorly performing affiliated funds is costly for plan participants.

Preview of the Results

- Poorly-performing affiliated funds are less likely to be removed from 401(k) plans than poorly-performing unaffiliated funds.
- Plan participants are not very sensitive to past performance and do not compensate for the favoritism bias in their asset allocations.
- Favoritism toward poorly performing affiliated funds is costly for plan participants.

Contribution to the Literature

Role of service providers in DC plans:

- Davis and Kim (2007); Cohen and Schmidt (2009); Duan, Hotchkiss, and Jiao (2012).

Design of DC plans:

- Benartzi and Thaler (2001); Madrian and Shea (2001); Choi, Laibson, Madrian, and Metrick (2002, 2004); Agnew, Balduzzi, and Sunden (2003); Huberman and Jiang (2006); Sialm, Starks, and Zhang (2014).

Favoritism in Mutual Fund Families:

- Nanda, Wang, and Zheng (2004); Gaspar, Massa, and Matos (2006); Reuter (2006); Kuhnen (2009).

Data Collection

We hand collect from Form 11-K filed with SEC the investment options offered in 401(k) plans.

- Plans offering company stock as an option need to file Form 11-K with the SEC.
- Sample covers the period between 1998-2009.
- We obtain a total of 26,624 filings.
- From the “Schedule of Assets” we obtain the name of the option and the current value of the investment into this option.
 - We use Form 5500 to track plans over time and for additional information at the plan level.
 - We link mutual fund options to the CRSP mutual fund database.
 - For sponsor characteristics we link plans to Compustat.

Sample Description

Sample Coverage:

Proportion of plans filing IRS Form 5500 (1998-2009)	30-35%
Number of participants	9 million
Number of plans	2,494
Number of sponsors	1,826
Number of trustees	112
Proportion of mutual fund trustees	82%
Proportion of assets with mutual fund trustees	96%

Plan Characteristics:

Plan size (average)	\$328 million
Participant account size (average)	\$42,107
Employer securities	17%

Mutual Fund Deletions

In 2003, the MFS Capital Opportunities Fund was ranked in the lowest performance decile relative to funds in the same style over the prior 3 years:

- It appeared on 29 menus: 7 times as an affiliated fund and 22 times as an unaffiliated fund.
- It was deleted during 2004 once as an affiliated fund and 10 times as an unaffiliated fund.

Logit Model of Fund Deletions

We estimate the following model:

$$\begin{aligned} \text{Prob}(DEL_{p,f,t} = 1) &= \Lambda(AF_{p,f,t-1}\beta_{AF} + \mathbf{R}_{f,t-1}^T\beta_{\mathbf{R}} + AF_{p,f,t-1}\mathbf{R}_{f,t-1}^T\beta_{\mathbf{AF}\times\mathbf{R}} \\ &+ \mathbf{Z}_{p,f,t-1}^T\beta_{\mathbf{Z}}), \end{aligned}$$

- Performance vector $\mathbf{R}_{f,t-1}$ is based on piecewise linear performance percentiles $Perf_{f,t-1}$ (Sirri and Tufano 1997).
- Performance percentiles $Perf_{f,t-1}$ are evaluated using style-adjusted returns of all mutual funds in the CRSP database over the prior 3 years.
- Specification includes fund type fixed effects (domestic equity, etc.), time fixed effects, and standard errors clustered at fund level.

Logit Model of Fund Deletions

We estimate the following model:

$$\begin{aligned} \text{Prob}(DEL_{p,f,t} = 1) &= \Lambda(AF_{p,f,t-1}\beta_{AF} + \mathbf{R}_{f,t-1}^T\beta_{\mathbf{R}} + AF_{p,f,t-1}\mathbf{R}_{f,t-1}^T\beta_{\mathbf{AF}\times\mathbf{R}} \\ &+ \mathbf{Z}_{p,f,t-1}^T\beta_{\mathbf{Z}}), \end{aligned}$$

- Performance vector $\mathbf{R}_{f,t-1}$ is based on piecewise linear performance percentiles $Perf_{f,t-1}$ (Sirri and Tufano 1997).
- Performance percentiles $Perf_{f,t-1}$ are evaluated using style-adjusted returns of all mutual funds in the CRSP database over the prior 3 years.
- Specification includes fund type fixed effects (domestic equity, etc.), time fixed effects, and standard errors clustered at fund level.

Logit Model of Fund Deletions

We estimate the following model:

$$\begin{aligned} \text{Prob}(DEL_{p,f,t} = 1) &= \Lambda(AF_{p,f,t-1}\beta_{AF} + \mathbf{R}_{f,t-1}^T\beta_{\mathbf{R}} + AF_{p,f,t-1}\mathbf{R}_{f,t-1}^T\beta_{\mathbf{AF}\times\mathbf{R}} \\ &+ \mathbf{Z}_{p,f,t-1}^T\beta_{\mathbf{Z}}), \end{aligned}$$

- Performance vector $\mathbf{R}_{f,t-1}$ is based on piecewise linear performance percentiles $Perf_{f,t-1}$ (Sirri and Tufano 1997).
- Performance percentiles $Perf_{f,t-1}$ are evaluated using style-adjusted returns of all mutual funds in the CRSP database over the prior 3 years.
- Specification includes fund type fixed effects (domestic equity, etc.), time fixed effects, and standard errors clustered at fund level.

Logit Model of Fund Deletions

We estimate the following model:

$$\begin{aligned} \text{Prob}(DEL_{p,f,t} = 1) &= \Lambda(AF_{p,f,t-1}\beta_{AF} + \mathbf{R}_{f,t-1}^T\beta_{\mathbf{R}} + AF_{p,f,t-1}\mathbf{R}_{f,t-1}^T\beta_{\mathbf{AF}\times\mathbf{R}} \\ &+ \mathbf{Z}_{p,f,t-1}^T\beta_{\mathbf{Z}}), \end{aligned}$$

- Performance vector $\mathbf{R}_{f,t-1}$ is based on piecewise linear performance percentiles $Perf_{f,t-1}$ (Sirri and Tufano 1997).
- Performance percentiles $Perf_{f,t-1}$ are evaluated using style-adjusted returns of all mutual funds in the CRSP database over the prior 3 years.
- Specification includes fund type fixed effects (domestic equity, etc.), time fixed effects, and standard errors clustered at fund level.

Piecewise Linear Performance Specification

To adjust for non-linearities we use a piecewise linear performance specification (Sirri and Tufano 1997).

- Linear Specification:

$$Perf_{p,f,t}$$

- Two-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.5), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.5, 0). \end{aligned}$$

- Three-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.2), \\ MidPerf_{p,f,t} &= \min(\max(Perf_{p,f,t} - 0.2, 0), 0.6), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.8, 0). \end{aligned}$$

Piecewise Linear Performance Specification

To adjust for non-linearities we use a piecewise linear performance specification (Sirri and Tufano 1997).

- Linear Specification:

$$Perf_{p,f,t}$$

- Two-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.5), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.5, 0). \end{aligned}$$

- Three-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.2), \\ MidPerf_{p,f,t} &= \min(\max(Perf_{p,f,t} - 0.2, 0), 0.6), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.8, 0). \end{aligned}$$

Piecewise Linear Performance Specification

To adjust for non-linearities we use a piecewise linear performance specification (Sirri and Tufano 1997).

- Linear Specification:

$$Perf_{p,f,t}$$

- Two-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.5), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.5, 0). \end{aligned}$$

- Three-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.2), \\ MidPerf_{p,f,t} &= \min(\max(Perf_{p,f,t} - 0.2, 0), 0.6), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.8, 0). \end{aligned}$$

Piecewise Linear Performance Specification

To adjust for non-linearities we use a piecewise linear performance specification (Sirri and Tufano 1997).

- Linear Specification:

$$Perf_{p,f,t}$$

- Two-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.5), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.5, 0). \end{aligned}$$

- Three-Segment Specification:

$$\begin{aligned} LowPerf_{p,f,t} &= \min(Perf_{p,f,t}, 0.2), \\ MidPerf_{p,f,t} &= \min(\max(Perf_{p,f,t} - 0.2, 0), 0.6), \\ HighPerf_{p,f,t} &= \max(Perf_{p,f,t} - 0.8, 0). \end{aligned}$$

Mutual Fund Additions

Do the competing incentives of mutual fund service providers leave a footprint on the plan's menu?

Compute the ratio of the number of affiliated (unaffiliated) menus to which the fund is added during the year to the total number of affiliated (unaffiliated) menus that do not yet include the fund as an option.

Mutual Fund Additions

Do the competing incentives of mutual fund service providers leave a footprint on the plan's menu?

Mutual Fund Flows

Are participants able to see through these incentives?

We look at three measures of new money growth (flows) into menu options:

$$NMG1_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{V_{p,f,t-1}(1 + R_{f,t})}$$

$$NMG2_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{V_{p,f,t} + V_{p,f,t-1}(1 + R_{f,t})}$$

$$NMG3_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{\sum_f V_{p,f,t-1}(1 + R_{f,t})}$$

We decompose flows into two components:

- Sponsor Flows: Flows due to additions and deletions.
- Participant Flows: Flows due to reallocations across menu options.

Mutual Fund Flows

Are participants able to see through these incentives?

We look at three measures of new money growth (flows) into menu options:

$$NMG1_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{V_{p,f,t-1}(1 + R_{f,t})}$$

$$NMG2_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{V_{p,f,t} + V_{p,f,t-1}(1 + R_{f,t})}$$

$$NMG3_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{\sum_f V_{p,f,t-1}(1 + R_{f,t})}$$

We decompose flows into two components:

- Sponsor Flows: Flows due to additions and deletions.
- Participant Flows: Flows due to reallocations across menu options.

Mutual Fund Flows

Are participants able to see through these incentives?

We look at three measures of new money growth (flows) into menu options:

$$NMG1_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{V_{p,f,t-1}(1 + R_{f,t})}$$

$$NMG2_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{V_{p,f,t} + V_{p,f,t-1}(1 + R_{f,t})}$$

$$NMG3_{p,f,t} = \frac{V_{p,f,t} - V_{p,f,t-1}(1 + R_{f,t})}{\sum_f V_{p,f,t-1}(1 + R_{f,t})}$$

We decompose flows into two components:

- Sponsor Flows: Flows due to additions and deletions.
- Participant Flows: Flows due to reallocations across menu options.

Subsequent Fund Performance

Are the decisions costly or beneficial to plan participants?

We form equal-weighted portfolios at the end of each year:

- For Affiliated and Unaffiliated Funds:
 - Kept Funds;
 - Deleted Funds;
 - Added Funds;
- Based on Past Performance Percentiles

The abnormal return $\alpha_{f,t}$ of fund portfolio f at time t is:

$$R_{f,t} - R_{TB,t} = \alpha_{f,t} + \beta_{f,t}^M (R_{M,t} - R_{TB,t}) + \beta_{f,t}^{SMB} (R_{S,t} - R_{B,t}) \\ + \beta_{f,t}^{HML} (R_{H,t} - R_{L,t}) + \beta_{f,t}^{UMD} (R_{U,t} - R_{D,t}) + \epsilon_{f,t}.$$

Conclusions

Our paper documents favoritism in retirement plans towards investment options affiliated with the service provider:

- Mutual fund families display leniency toward their own funds following poor fund performance.
- Their decision is not based on an informational advantage as these funds do not subsequently outperform.
- Finally, participants do not counteract the biased decisions of the trustees.
